## DETAILED ACTION

### ***Allowable Subject Matter***

1. Claims 3-13, 15-18, and 36-56 are allowed.
2. The primary reason for the allowance of claim 8 is the inclusion of the various tests being indicative of performance in an internal combustion engine and storing a reference value based on desired operating conditions and comparing the test result to the reference value. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.
3. The primary reason for the allowance of claim 11 is the inclusion of the various tests being indicative of performance in an internal combustion engine and analyzing a change in the test results upon changing a plurality of conditions with a test program. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.
4. The primary reason for the allowance of claim 15 is the inclusion of storing each of the plurality of compositions in vessel and arranging the vessels in a predetermined sequence. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

Art Unit: 2856

5. U.S. Patent Application 2004/017116 (Carrick et al.) discloses a plurality of oil compositions with a major base oil and a minor part of an additive. It also discloses subjecting these compositions to a plurality of tests under computer control. These test are designed to be indicative of the oils performance in an internal combustion engine. However, there is no disclosure or suggestion to, store the samples in vessels and arrange the vessels in a predetermined sequence, or compare the test results to a reference value where the reference value is based on desired operating conditions of statutory requirements, or analyzing the results based on changing a plurality of conditions with the control program.
6. U.S. Patent Application 2002/0123650 (Kolosov et al.) discloses a highthrouput method for determining the composition of various substances including oils and emulsions. Kolosov discloses storing samples in libraries and subjecting samples to tests for determining viscosity. However, there is no disclosure or suggestion to subject the oils to wear tests, corrosion test, or hydrodynamic test that are selected to be indicative or performance of a combustion engine.
7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
